Subject: Scrubber blowdown use on fly ash handling

Bob,

As a follow up to our meeting yesterday, we're discussing the impact of using variable application rates of scrubber blowdown on site handling and downstream fate of the fly ash. A couple questions:

Is removal and re-use of the GGS fly ash performed by Plains Pozzolanix based in Lincoln, NE?
Would you object to us contacting Plains Pozzolanix to discuss the impact of variable scrubber blowdown content on the fly ash re-use - in particular elevated chloride content, etc?
And if not, do you have a contact person?

Thanks,

Alex
